

Harmony OS software

Install APPs, Timezone change

You will need:

1. Laptop with Windows
2. USB-A / USB-A cable
3. The vehicle's VIN must be registered (see contact information below)

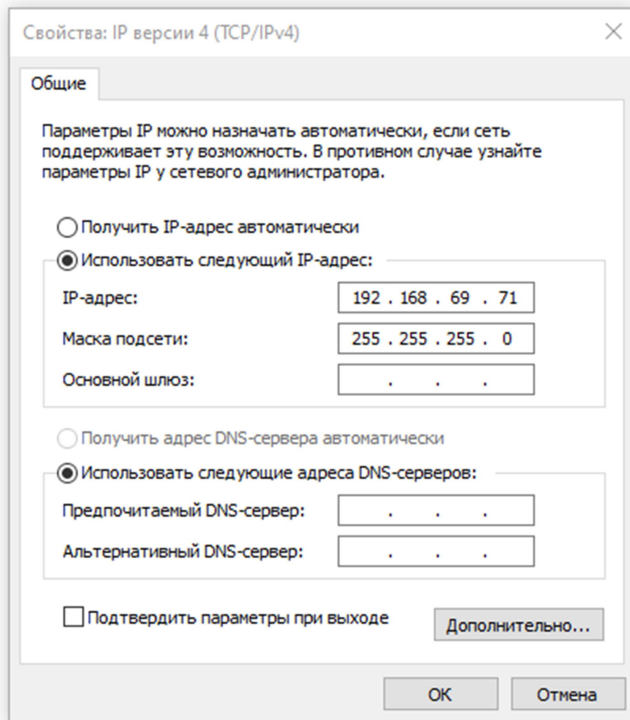

It is recommended to use a cable no longer than 1m and at least 5mm thick.

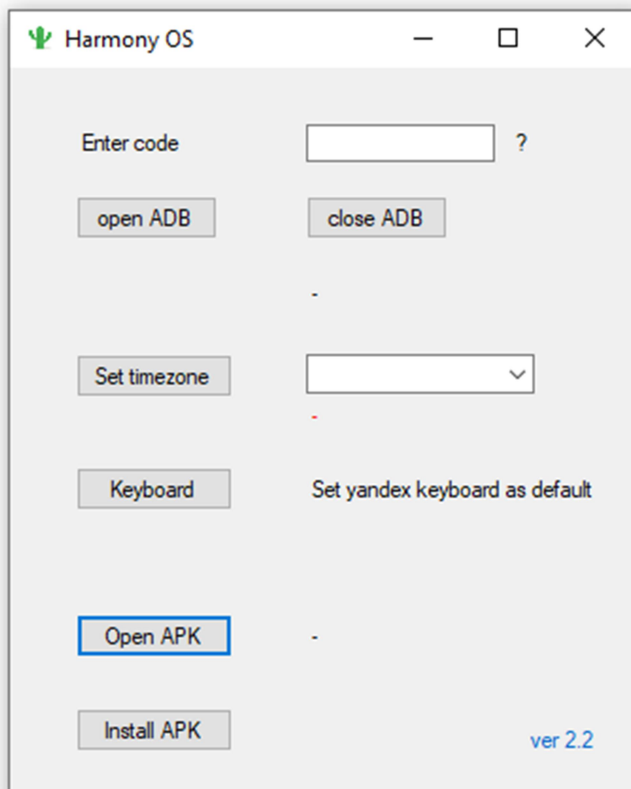

Also, you will need a cable for connection via the OBD connector. You can buy any cheap one with such connectors anywhere, but it will require a small modification (see here <https://deepals7.ru/img/obd.jpg>) Without this modification, the cable will **not work**

1. On the network card through which the car will be connected, set the IP address: 192.168.69.71
You can see here <https://youtu.be/3hSvC0XKm8U>

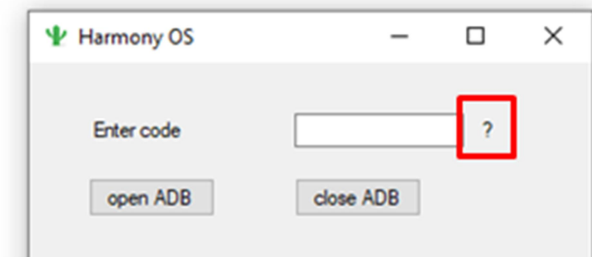

2. Download and install software to your windows laptop:
https://disk.yandex.by/d/ENz4aGZ_h91tjQ (password required)

3. Connect laptop and car via OBD cable (yellow on screen)
4. Connect laptop and car via USB cable
5. Check that your computer has internet access.
6. Check that the **car has** internet access.

7. If the vehicle's VIN is registered on the server (see Contacts below), click the question mark in the program, then enter the vehicle's VIN on the page and receive an access code. Enter the access code in the window next to it and click the Open ADB button.

If ADB is opened successfully, you will be able to

- Set timezone
- Install applications. Like navi and youtube and etc.
 - Open APK – open file (apk only, but not xapk)
 - Install APK
- Set Yandex Keyboard as your default keyboard by clicking the Keyboard button (you'll first need to install the keyboard as an APK app).

If the Install APK button says "Successful," but the app doesn't appear in the car, check that the car **has internet** access (via Wi-Fi).

You can download some of APKs here.
